

XBR Store Analytics

Exception Based Reporting Loss Prevention Tool

XBR Store Analytics is the leading exception-based reporting system that provides decision support for all areas of retail operations. It helps retailers cut through mountains of enterprise data to quickly and easily identify exception conditions that may indicate compliance, fraud, loss, training, or productivity issues.

XBR Store Analytics is the one business tool that can help you dramatically reduce shrink for immediate savings, greater productivity and ROI, in as little as three months. XBR Store Analytics is now installed and monitoring in excess of 150,000 retail stores worldwide saving clients thousands of dollars every day.

The flexible design of XBR Store Analytics allows choice of operating system, database and Point of Sale system. **We will integrate with most existing Point of Sale Systems** and can also integrate with digital video, electronic article surveillance and other acquisition tools. XBR leads the way in identification, tracking and management of situations and trends for the loss prevention and store operations departments.

Transaction fraud and decreased productivity go hand in hand. XBR Store Analytics gives you the power to act – and solve both problems at the same time. Plus, new automated monitoring, reporting and processing features help you make more effective use of your time and human resources.

While other loss prevention systems can take up to three days to report a suspicious transaction, XBR can flag incidents almost as they happen. At home office, remotely or at store level, XBR Store Analytics provides critical data fast, along with analysis tools to allow you to quickly move from reaction to dynamic pro-action.

Great queries and reports are only useful if they are run and assessed in a timely manner. The automated reporting capabilities can report on issues almost as they happen and distribute the reports to you via your choice of email, SMS, pager or through web browser access from anywhere in the world.

XBR Store Analytics goes into action right away, using exception-based reporting methods to easily identify, track and manage potentially fraudulent transactions. The system then alerts you to exception conditions immediately for quicker investigation, confrontation and ultimate resolution.

By eliminating conventional information gaps between home office and front lines, XBR gives you instant power to:

- Recognise critical trends at a glance
- Correct problems early on
- Solve problems at the root cause, and
- Plan proactively for future growth

XBR Store Analytics is designed to hit the ground running, supported by a team of loss prevention experts and a set of best practices. Not just a mining

tool, XBR builds a dynamic analytics process that grows as you progress from novice to power user.

MICROS has acquired Datavantage and Commercialware, leaders in retail solutions in the US market, and acquired the worldwide distribution rights to the "Enterprise" merchandising system. Utilising our branch network throughout Asia Pacific, MICROS-Retail now provides a full suite of retail solutions to this region. The suite includes:
